Clinical Radiology is the mainstay of providing quality care to patients. Medical Imaging is complex and conducting imaging based research is more complex but provides ground for its growth.

The book by Dr Mahnoor Hafeez has research abstracts, letters to the editors, original articles, system-wise unique case reports which are commonly encountered in clinical practice. It focuses on CT, MRI, clinical audits, physics, artificial intelligence and radiomics. This book also addresses technical issues being faced by the practicing radiologists in the Asian countries.

Readers of this book would benefit from scholarly articles by renowned radiologists, scientists, and professionals in all disciplines. It provides an insight radiology residents and fellows, How to design methodology for research studies. It also contains a glossary of research terminologies for basic understanding of the readers. It outlines study types, hierarchy and flowchart demonstrating the entire research publication process.

This book would be useful to those who wish to excel in medical imaging and ambitious in scholastic contribution in the form of publications. Radiology residents, practitioners, students, and paramedics would find it useful too. The language is simple, and the style is easy and even conversational.
